Executive Summary – First quarter 2023

Normalizing commodity prices

● Bumitama recorded IDR 3.60 trillion in revenue in 1Q23, or 8% lower than the same period in 2022
  o Revenue contribution from CPO climbed 3%, attributable to 19% rise in sales volume following inventory drawdown which more than offset the 14% decline in selling price within the period
  o Revenue from PK on the other hand, recorded 58% decline due to 11% lower sales volume and 53% fall in price
    • Average selling price of PK fell more than CPO in 1Q23 because palm kernel oil has been unusually trading at discount versus palm oil in Rotterdam, due to price competitiveness from the soft oils

● Net profit in 1Q23 amounted to IDR 429.12 billion, or 51% lower than 1Q22, primarily due to lower average selling price amid normalizing commodity prices and higher fertilizer prices
  o Notably, the 1Q23 net profit figure is still 15% higher than the quarterly average in the past five years, and the second highest first quarter figure on record

Normalized low-cycle period

● Year-on-year basis, production in 1Q23 also trended down due to high base effect while quarter-on-quarter basis, oil palms experienced a normalized low-cycle season
  o FFB production from internal sources reached 745,585 tons in 1Q23, declining 13% in both YoY and QoQ terms
  o The trend was different in the 1Q22 period when Bumitama recorded FFB harvests of 852,441 tons which was 18% higher than the previous quarter, a typically high-cycle period

● Bumitama production will be bigger in the second half of the year. Hence, a contrasting trend versus last year

Note:
• Net profit stated above is attributable to Owners of the Company
• QoQ is comparison between 1Q23 and 4Q22 periods

Strong Fundamentals – Financial Performance

Significant uptrend in palm oil price over the last three years propelled Bumitama’s performance

Note:
- MDEX 3rd month delivery
- CAGR calculation is based on 12-month rolling formula
- Net profit is attributable to Owners of the Company
Strong Fundamentals – Production Performance

Stable production, with rising trend, has provided additional boost

Note:
CAGR calculation is based on 12-month rolling formula
Strong Fundamentals – Productivity Resilience

Excellence through discipline is the driving force behind our productivity resilience over the years despite adverse weather condition.

Note:
- Productivity calculation is based on 12-month rolling formula
- CPO yield is calculated using consolidated OER
Strong Fundamentals – Gearing Ratio

Robust performance in the past five years has paved the way for significant deleveraging
